

Product Catalog

Nexora Technologies offers a suite of AI-powered enterprise products designed for automation, security, analytics, and customer engagement.

NexChat (AI Customer Support Platform)

NexChat is an AI-powered conversational platform designed to automate customer service interactions across email, chat, and voice channels. It uses natural language processing models trained on domain-specific enterprise datasets.

Key capabilities include:

- Multi-channel support (chat, email, WhatsApp integration)
- Real-time response generation using AI models
- Automatic ticket classification and prioritization
- Sentiment detection to escalate urgent cases
- CRM integration with Salesforce and HubSpot

NexChat was first released in 2021 and has undergone multiple iterations. Version 3.0 introduced voice-based support and automated conversation summarization, significantly reducing human agent workload.

NexVision (Retail AI Platform)

NexVision is a computer vision-based analytics platform used in retail environments to monitor customer behavior, shelf inventory, and store efficiency.

Key features include:

- Real-time customer movement tracking inside stores
- Automated shelf inventory detection using camera feeds
- Heatmap generation for customer flow analysis
- Alert system for low stock detection

NexVision is widely used in large retail chains across India and Southeast Asia. It helps businesses optimize store layouts and increase conversion rates.

NexGuard (Cybersecurity Platform)

NexGuard is an AI-driven cybersecurity monitoring system that provides threat detection, anomaly identification, and automated incident response.

Key features:

- Real-time intrusion detection system (IDS)
- AI-based risk scoring for network activity
- Automated alerts for suspicious behavior
- Compliance reporting for ISO and GDPR standards

NexGuard 2.0, launched in March 2025, introduced predictive threat analysis using historical attack pattern recognition.
